

"MICRONAIL AND METHOD FOR DENTAL USE"

* * * *

5

ABSTRACT

The invention refers to a method for fastening a protective membrane for dental use to a jaw bone and consists, first of all, in fitting into the bone a micronail having a head with at least one means of retention and, then, the fastening of the membrane to said means of retention on the head of the micronail. The
10 head (12) of the micronail features means of retention for fastening a membrane, directly or with the aid of a retention element, after the micronail has been fitted into the jaw bone involved.
